

1. Show that $(-3,8)$ is a solution to $5x - 7y = -71$

2. Graph $y = x - 3$ by plotting three points.

3. Graph $y = 3x + 1$ by plotting two points.

4. Graph $3x + 4y = 12$ by plotting axis intercepts.

5. Graph $2x - 5y = 20$ by plotting axis intercepts.
